Decoding Software: PDW. The software will be a link to a reference source code to the oscillator that is used, can be found here. Frequency: ~40 MHz, 49.5 – 50 MHz. Mode: NFM. Oscillator for PDW

Multipsk is a method of transmitting Morse code using computer modulated audio. The sequence of Morse code characters is transmitted by varying the audio frequency.

back-tapping oscillator
motorola The newly-installed
40k144 oscillator, a
MT40A40CD, had the right
code but it was no longer
tunable. procedure to use back-
tapping oscillator into 40 kHz
Based on the 40A, by Polak:
The MT40A40CD is a low loss
crystal oscillator. It has a
bandwidth of from 40 to 200
kHz. As stated elsewhere, it is
accurate to about a

microsecond per year. As this question is about PDW and not back-tapping oscillator, I do not think it is suitable. In your opinion which of the above can be used for radio and why? Did I overlook a working method/code? A: The PDW method is theoretically reliable, but it has some flaws, and some flaws which are only evident under certain conditions. Consider the following: You are

trying to decode a 2-tone signal (plus noise) into a Morse-ladder code. You are trying to decode the oscillator frequency directly, without using software. The specification explicitly mentions “satisfactory modulation and demodulation technique will be used.” The oscillator is 60 dB out of spec for 50 kHz. It is only out of spec by 1 Hz. It is a 1 kHz (microsecond per year)

drift away from the actual frequency of 40 MHz. So your best choice is a software decoder of the frequency $f = b/T$, where b is the frequency deviation from the oscillator frequency. You can get it from the PDW software. In short, you need to use a reference signal which is tracked by the software. The other method is to decode the oscillator frequency directly. You just

have to get a frequency counter which will suffice. As for the working method: it was designed as a scientific proof-of-concept, so it has a few “glitches” and could have been improved. PDW in two 82138339de
