Q: converting datetime string from xml element returns datetime offset from current timezone i'm trying to convert the time from an xml element into a datetime object that can be referenced by the user. but when i do, and save it, the string is in the past and shows the time as being offset. this is what i have currently: from xml.etree import ElementTree from datetime import datetime, time, date, timedelta schema = etree.parse("demo.xml") data = schema.find("results").find("result").find({"data": "DATE"}) date = datetime.strptime(data, "%Y-%m-%dT%H:%M:%S") print date the output is: 2018-11-22T07:59:47-05:00 when what i would like is: 2018-11-22 07:59:47 what is the proper way to do this? A: You have two problems: If you just want the date portion of the datetime.strptime, you can use: datetime.strptime(data, "%Y-%m-%dT%H:%M:%S")[:10] If you want to know the time portion as well, then you can do: from datetime import datetime, time, date, timedelta data = '2018-11-22T07:59:47-05:00' dt = datetime.strptime(data, "%Y-%m-%dT%H:%M:%S") print(dt) # 2018-11-22 07:59:47 print(dt.time()) # 07:59:47 However, in general, you would probably be better off with a simple strptime over the XML date/time format. /* * Copyright 2019 Xilinx Inc. * * Licensed under the Apache License, Version 2.0 (the "License"); * you may not use this file except in compliance with the License. * You may obtain a copy of the License at * * 6d1f23a050
